MODULUX

OPERATING INSTRUCTIONS

The MODULUX is a revolutionary device that creates the true organ vibrato for all electric and wind instruments without loss of volume. Keeping the future in mind the MODULUX is capable of producing a most unusual vocal sound so popular in today's music. The MODULUX features accent and gain switches for input matching and a control for desired intensity. A footswitch is supplied for convenient operation.

FUNCTION

FUNCTION DESCRIPTION

ACCENT SWITCH-----	Increases or decreases extreme TREBLE tone range.
GAIN SWITCH-----	Increases or decreases sensitivity to compensate for variations in instrument pick-ups.
INTENSITY CONTROL-----	Adjusts INTENSITY.
POWER SWITCH-----	Connects POWER to MODULUX.
POLARITY SWITCH-----	Adjusts line POLARITY for hum or noise elimination.

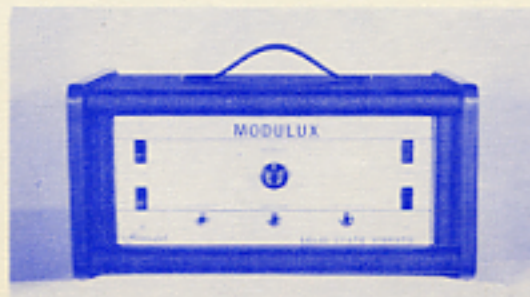

OPERATING NOTES:

You may connect MODULUX to any standard musical instrument amplifier as well as use any conventional electric musical instrument.

For additional effect mix in REVERB to desired level and possibly add a slight amount of TREMOLO.

For best results use a foot operated pedal volume and tone control.

The Standel Company DOES NOT claim that MODULUX is a duplicate for a LESLIE loudspeaker system. The MODULUX is a revolutionary device establishing a NEW SOUND for the discriminate musician.
